

Modern Workplace with Secure Score V2.1

A Click-to-Run™ Solution from TD SYNEX

TD SYNEX Secure Score solution allows partners to apply Multi-Factor Authentication policies for all users except a Secure Score user that can be used as a break glass or emergency access account. In our Version 2.1 we have added some great features which includes using an automation account that will be added to your tenant domain for managing the scheduled tasks. This will be configured as a service principle without credentials or logon capabilities. We also use runbooks that will provide alert notifications when a runbook is executed. In the advanced option, customers can upload their custom code using a BYOC which allows our partners to run their own runbooks. Post deployment, partners can leverage the Score based on risk assessment to make recommendations to improve customers' Office 365 security posture.

Key Features

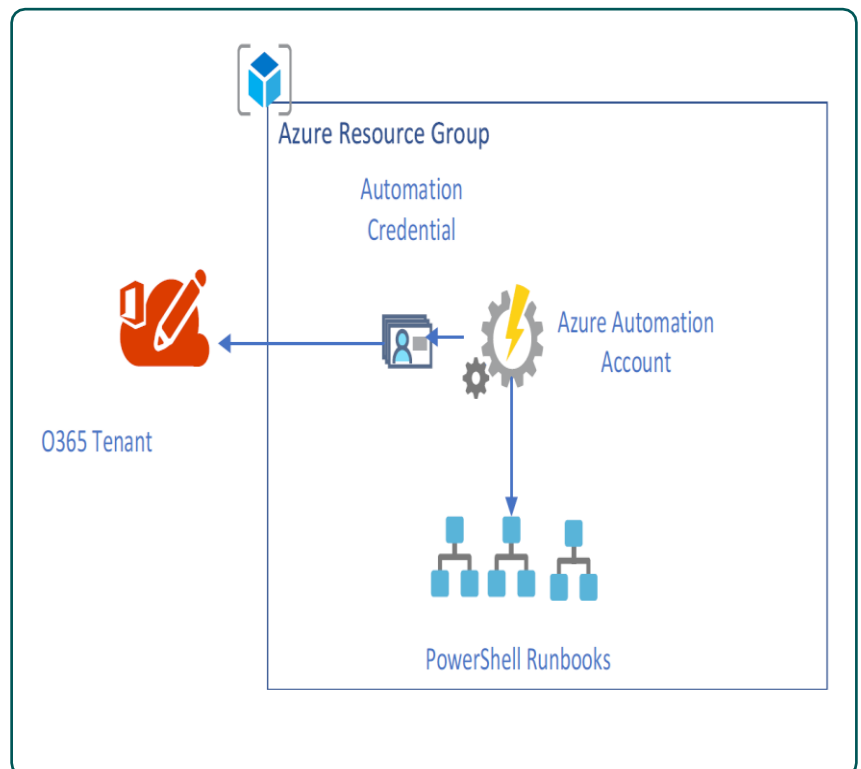

- Creates a security baseline with pre-configured security policies based on industry best practices.
- Deploys Conditional Access policies (Azure AD P1, or P2 required).
- Compatible with Microsoft 365 Business, E3 and E5 subscriptions.
- Allows you to bring your own code (BYOC) for runbooks.
- Score based risk assessment tool to analyze risk and take action to improve security posture.

Core Infrastructure

- Office 365
- Azure Automation
- Conditional Access policies
- Azure Run Books
- Log Analytics

Business Outcomes

- Enabling Conditional Access policies strengthens your environment against potential attacks
- Automated Security policies
- Increases your security level
- Establishes a security baseline

Deployment Options

- Deploy with or without Security Defaults
- Creates an automation account
- Creates a Break Glass group for admin users without MFA
- Options for a certificate-based password
